

PROTECTION OF LICENSED SERVICES:

Request proposed Section 15.109(f) be modified so that it more clearly requires that BPL operators react to complaints of interference quickly and decisively. Procedures for remediation are ambiguous.

15.1509(f) should require an expeditious reply to complaintant re: remediation with responsibility squarely placed on BPL provider. A specific initial response time of twenty four hours to initial complaint would seem reasonable.

BPL opens up new revenue possibilites for the energy industry, but proposed protection of existing licensed RF services is entirely too ambiguous.
